

BlinkIT Grocery Sales Analysis

Transforming raw transactional data into business-ready insights through interactive Power BI analytics

PROJECT OVERVIEW

Analyzing Quick Commerce Performance

Dataset Scope

8,523 records across 12 features covering item attributes, outlet characteristics, and performance metrics in the quick commerce retail domain.

Analysis Goal

Identify trends across products, outlet characteristics, and locations to drive strategic decision-making and operational optimization.

Key Performance Snapshot

\$1.20M

Total Sales

Overall revenue generated
across all outlets and product
categories

\$141

Average Sales

Per-item sales performance
indicator

3.92

Average Rating

Customer satisfaction score
across all items

9K

Items Analyzed

Total product SKUs in the
dataset

These metrics provide a comprehensive view of BlinkIT's business health and operational performance.

Product Category Performance

Top Categories

Fruits and Snacks lead sales, indicating strong demand for essential and fast-moving products

Fat Content Trends

Low Fat items contribute 77.36% of total sales, significantly outperforming Regular items at 22.64%

Strategic Impact

Insights support inventory prioritization and category-level planning decisions

Outlet Performance Drivers

Supermarket Type 1 dominates with \$787.55K in sales, making it the most impactful outlet format. Medium-sized outlets generate the highest contribution, highlighting clear opportunities for outlet format optimization.

Regional Sales Distribution

Tier 3 Locations

Lead in total sales performance

Tier 2 Locations

Second highest contributor

Tier 1 Locations

Metro areas show lower penetration

📌 **Key Insight:** Stronger sales penetration in non-metro regions compared to metro locations suggests untapped potential in Tier 3 markets for expansion strategies.

Growth Trajectory Over Time

Outlet establishment trend shows clear growth, with a notable spike in 2016, reflecting BlinkIT's expansion and increasing market presence over time.

Interactive Dashboard Capabilities

01

Outlet Type Filtering

Analyze performance across Grocery Stores and Supermarket variants

02

Size-Based Analysis

Compare High, Medium, and Small outlet performance metrics

03

Item Type Exploration

Drill down into specific product categories for detailed insights

Dynamic slicers enable users to explore sales patterns across different business dimensions quickly and effectively.

Actionable Business Insights

1

Category Focus

Prioritize Fruits and Snacks as core revenue-driving categories with expanded assortments

2

Product Mix

Expand Low Fat product offerings to match the 77% customer demand trend

3

Outlet Strategy

Focus expansion on medium-sized outlets and use Supermarket Type 1 as the standard model

4

Regional Growth

Accelerate expansion in Tier 3 locations where sales performance is strongest

5

Quality Control

Leverage product ratings (3.92 avg) to improve customer experience and satisfaction

Driving Data-Informed Decisions

This project demonstrates how retail sales data can be converted into actionable insights using Power BI. By combining KPIs, product analysis, outlet performance, and location-based trends, the dashboard supports informed decision-making related to inventory planning, outlet strategy, and regional growth.

Multi-Dimensional Analysis

Comprehensive view across products, outlets, and locations

Strategic Clarity

Clear recommendations for expansion and optimization

Business Impact

Data-driven foundation for future growth initiatives
