

BlinkIT Grocery Sales Analysis Report

1. Project Objective

The objective of this project is to analyze BlinkIT's grocery sales data to identify trends across products, outlet characteristics, and locations. The goal is to transform raw transactional data into business-ready insights using an interactive Power BI dashboard.

2. Dataset Overview

The dataset contains detailed information related to grocery items and outlets, including:

Dataset: BlinkIT Grocery Data

Records: 8,523 | **Features:** 12

Domain: Quick Commerce / Retail Analytics

Item attributes: Item Type, Fat Content, Visibility, Weight

Outlet attributes: Outlet Type, Size, Location Tier, Establishment Year

Performance metrics: Sales, Rating

This structure allows multi-dimensional analysis of sales performance and outlet behavior.

3. Key Performance Indicators (KPIs)

The dashboard presents the following high-level metrics:

Total Sales: \$1.20M

Average Sales: \$140.99

Average Rating: 3.92

Total Items Analyzed: 9K

These KPIs provide a quick snapshot of overall business health.

4. Product-Level Insights

- Low Fat items contribute a higher share of total sales compared to Regular items.
- Fruits and Snacks are the top-performing item categories, indicating strong demand for essential and fast-moving products.
- These insights can support inventory prioritization and category-level planning.

5. Outlet Performance Analysis

- Medium-sized outlets generate the highest contribution to total sales.
- Supermarket Type 1 outperforms other outlet types in both total sales and item volume, making it the most impactful outlet format.
- This highlights opportunities for outlet format optimization.

6. Location-Based Insights

- Tier 3 locations lead in total sales, followed by Tier 2 and Tier 1.
- This suggests stronger sales penetration in non-metro regions compared to metro locations.
- Such insights can guide regional expansion strategies.

7. Outlet Establishment Trend

Analysis based on Outlet Establishment Year shows a clear growth trend in the number of outlets over time, reflecting BlinkIT's expansion and increasing market presence.

8. Dashboard Interactivity

The Power BI dashboard enables dynamic analysis through filters on:

- Outlet Type
- Outlet Size
- Item Type

These slicers allow users to explore sales patterns across different business dimensions quickly and effectively.

9. Dashboard

10. Business Recommendations

- Prioritize **Fruits and Snacks** as core revenue-driving categories

- Expand **Low Fat product assortments** to match customer demand trends
- Focus expansion and optimization on **medium-sized outlets**, the highest revenue contributors
- Accelerate growth in **Tier 3 locations** where sales performance is strongest
- Use **Supermarket Type 1** as the standard model for future outlet launches
- Leverage **product ratings** to improve quality control and customer experience

11. Conclusion

This project demonstrates how retail sales data can be converted into actionable insights using Power BI. By combining KPIs, product analysis, outlet performance, and location-based trends, the dashboard supports informed decision-making related to inventory planning, outlet strategy, and regional growth.
